To the Chairman and Councillors of the  
Langport Rural District Council

Mr. Chairman, Ladies and Gentlemen,

I beg to submit my Annual Report for 1968.

It was a healthy year in Langport with very little infectious disease.

The Health Department worked smoothly, dealing with a great deal of routine work, and continued to give 100% meat inspection.

Two major problems seem common to Rural Districts these days. One is abandoned motor cars and the second is gypsies and fellow-travellers who litter the countryside with the by-products of their current trade which appears to be dealing with scrap metal. In Langport we seem to have made a satisfactory arrangement for dealing with motor cars but the gypsy problem remained unresolved.

I am, Mr. Chairman and Councillors,

Your obedient Servant,

A. M. McCall

Medical Officer of Health

## SECTION A

### Statistics and Social Conditions of the Area

Population Fourteen thousand, three hundred and eighty was the mid-year population for 1968 as estimated by the Registrar General, giving a population density of 0.24 per acre. The rateable value increased to £385,762 and the product of a penny rate to £1,465.

Birth Rate The corrected Birth Rate for 1968 was 15.00, compared with the national average of 16.9. There were thirteen illegitimate births.

Death Rate The corrected Death Rate for the year was 11.17, the comparable national figure was 11.9 per thousand population. In Appendix A, Table 3, I have given a list of the causes of death. There were sixty-one deaths due to heart disease, forty-three being coronary heart disease. "Strokes" accounted for twenty-three deaths. There were twenty deaths from chest conditions, mainly pneumonia and bronchitis. Of the thirty-four deaths due to cancer, five were due to lung cancer.

Throughout this century there has been a decline in the mortality rates of all age groups. The decline is, of course, less in the older age groups. A number of factors have helped; improved public health services, advances in medical diagnosis and treatment and the widespread use of antibiotics in recent years. Quite as important has been the great improvement in living standards. Poor housing and working conditions and inadequate nutrition predispose to and cause disease. The poverty of many people in the past created a barrier to effective treatment.

Although mortality rates for all causes of death have declined, the rates for certain diseases have increased, heart disease and cancer being the most notable. Coronary heart disease has increased in all age groups and in middle-aged men it is by

# Introduction

The purpose of this book is to provide a comprehensive overview of the current state of research in the field of artificial intelligence. The book is organized into several chapters, each focusing on a different aspect of the field. The first chapter, "Introduction," provides an overview of the field and its history. The second chapter, "The Current State of Research," discusses the most recent developments in the field. The third chapter, "The Future of Research," discusses the challenges and opportunities that lie ahead. The fourth chapter, "Conclusion," summarizes the key findings of the book.

The book is intended for a wide range of readers, including students, researchers, and practitioners. It is written in a clear and concise style, making it accessible to a broad audience. The book is also a valuable resource for anyone interested in the field of artificial intelligence.

The book is organized into four main parts. The first part, "Introduction," provides an overview of the field and its history. The second part, "The Current State of Research," discusses the most recent developments in the field. The third part, "The Future of Research," discusses the challenges and opportunities that lie ahead. The fourth part, "Conclusion," summarizes the key findings of the book.

The book is written in a clear and concise style, making it accessible to a broad audience. It is a valuable resource for anyone interested in the field of artificial intelligence.

The book is organized into four main parts. The first part, "Introduction," provides an overview of the field and its history. The second part, "The Current State of Research," discusses the most recent developments in the field. The third part, "The Future of Research," discusses the challenges and opportunities that lie ahead. The fourth part, "Conclusion," summarizes the key findings of the book.

far the largest single cause of death. Although the exact cause of the disease is not known, certain factors appear to increase the risk, these include cigarette smoking, obesity and inactivity. Cigarette smoking remains as popular as ever, obesity is widespread and people who take active exercise get fewer every year. Only half of all patients survive their first heart attack and the majority who die do so within the hour.

The incidence of cancer of the lung continues to rise, particularly in middle-aged women. The cause of cancer is not yet known but the association of cigarette smoking and lung cancer is well known. The prognosis for persons with lung cancer is not good. Five years is an optimistic estimate. It therefore would seem prudent to adopt a mode of life which would at least not predispose towards these two killers.

Maternal Mortality There were no maternal deaths in 1968.

Stillbirths There were two stillbirths, giving a still-birth rate of nine per thousand total births.

Infant Mortality Three infants died during the year, all due to congenital abnormality.

Social Habits The cost of living continued to rise despite the freezing of wages commenced in 1966.

A message from the Minister of Housing and Local Government was considered by the Council at their January monthly meeting. The message indicated the necessity to secure a substantial surplus in the country's balance of payments. This meant a reduction in the resources which would otherwise have been available for personal living standards and standards of public service. This set the tempo for the whole of 1968.

## SECTION B

### General Provision of Health Services in the Area

The Somerset County Council, as local health authority, continued to provide and administer the local health services within the Rural District.

The child welfare clinics continued to be well supported and the figures for Curry Rivel show a slight increase.

Details of my school medical inspections are given in Appendix B, Table 4. It shows that there was a high acceptance rate for school meals in the majority of schools and for milk in the primary schools. Fivehead had 100% acceptance for both.

In my last report I mentioned the increasing demand for play-groups and at the end of the year there were five in operation in the Rural District.

## SECTION C

### Prevention and Control over Infectious Diseases and Other Diseases

Details of infectious diseases notified are shown in Appendix C, Table 1, and they were mainly measles and whooping cough, the latter mainly occurred in the Somerton area.

Apart from the diseases notified, a fair amount of diarrhoea and vomiting occurred in a sporadic manner during the year. A fair amount of work was done on investigation but the precise cause was not discovered but was presumed to be a viral infection.

Immunisations continued to be given at the clinics until the private practitioners records were taken over by the computer at County Hall, after which time immunising in the clinics ceased and became the sole responsibility of the private practitioner concerned.

Following receipt of the Ministry Circular concerning measles vaccination, the County Medical Officer arranged to make vaccine available to general practitioners for the children at risk between the ages of 4 - 7 years. No measles vaccine was used in the child welfare clinics.

I carried out my B.C.G. programme against tuberculosis in the spring. Children born in 1957 were those offered vaccination. I vaccinated 85 at Huish Episcopi Secondary Modern School and 14 at St. Gilda's Convent School.

The same arrangement for the examination of cervical smears, initiated in 1967, continued.

There was no visit of the Mass Radiography Unit to the town during the year.

During the year, the Divisional Veterinary Officer of the Ministry of Agriculture, Fisheries and Food, notified me of three cases of Salmonella infection occurring in farm animals. The offending organism was Salmonella dublin in each case. The farms were visited and the farmers warned of the possible dangers of human infection. No such cases occurred.

Home Safety The Public Health Committee co-operated with the S.W. Area Committee of RoSPA and organised a "Return of Drugs" campaign from 20th October to 2nd November. The public response to this first effort was encouraging and people took unwanted medicines to the local chemists.

## SECTION D

### Environmental Health Services

#### A. Sanitary Circumstances

Climatic Conditions In 1968 the weather was relatively mild but the summer disappointing with long periods of dull overcast conditions. In July, particularly, severe rain was experienced which caused flooding in certain parts of the district.

Water Supply The water supply from the Wessex Water Board was satisfactory in quality and quantity. All twenty-eight samples examined in their laboratory were satisfactory. In addition, forty-five samples taken by our public health staff and submitted to the Public Health Laboratory, were also satisfactory. However, of the twelve private supplies tested during the year, ten were unsatisfactory and, in some cases, heavily polluted. I think this again points to the fact that there must be a fairly large number of our residents drinking potentially dangerous water.

Drainage and Sewage Disposal Work continued throughout the year on the Fivehead scheme of sewerage and sewage disposal and the works were scheduled to come into operation early in 1969. In view of the completion of this section of the scheme, the Council gave instructions to Consulting Engineers to prepare a combined scheme for the enlargement of the Somerton works and the sewerage of the parishes of Kingsdon, Charlton Mackrell and Keinton Mandeville.

Of the four parishes already with main drainage and disposal systems, that at Curry Rivel gave frequent trouble and poor effluent samples were reported on in April, July and November. Work progressed in Langport in getting properties connected with the main sewer and obviating pollution of the cross ditches.

Refuse Disposal The Council continued to collect refuse by direct labour and the controlled tip in Somerton continued in use. In February a section of it caught fire and only energetic action by the public health department staff prevented it spreading to the whole tip.

A major problem besetting Rural Districts these days is the abandonment of motor cars. The Civic Amenities Act, 1967, gave Councils power to act to remove abandoned vehicles and we were able to make facilities available adjacent to the Somerton tip for the use of a private contractor who undertook to deal with cars abandoned in our district. He dealt with 46 abandoned cars, 36 on which the Rural District took action, and a further 197 from garages, making a total of 233 during the year. Merrifield aerodrome is a favourite dumping ground and in October, twenty cars, which, of course, had had all their useful parts taken out, had to be removed.

Rodent Control The Council's whole-time operator carried out regular inspection of the district during the year in addition to his work on contract schemes. This involved him in 1,546 visits.

Nuisances Complaints of nuisances varied but the majority concerned unsatisfactory drainage and pollution of ditches. This type of complaint will continue until the Council's scheme for the sewerage of the whole district has been completed. Serious pollution was experienced in the stream in Ile Brewers and also the River Cary at Babcary. Your Public Health Inspectors took energetic action in both cases.

A complaint of mosquitos in the cross ditches of Langport was one of the slightly less usual type of complaint and was dealt with by spraying.

Caravan Sites There is one site licensed for seasonal use and twenty-six single caravans licensed, one of these being for gypsies at Drayton.

The gypsy problem continued to give rise to concern. Increasing numbers of gypsies, didicois and fellow-travellers congregated on the Langport side of the Merrifield aerodrome. One cannot help but feel they were directed there by some person or persons unknown, perhaps, with the suggestion that a site would be established for them in that area. It is, in fact, on the higher and most exposed part of the aerodrome, most distant from schools, welfare and shopping facilities and the least suitable part of the aerodrome for the purpose. In an endeavour to obtain sites for gypsies, the Clerk wrote to all parish councils seeking their co-operation in finding suitable small sites. Not one parish was able to suggest an acceptable area for the reception of gypsies although a farmer in High Ham did offer three sites but unfortunately no water was available in the vicinity.

#### B. Factories Act

Details of inspections carried out by the Public Health Inspectors are shown in Appendix D, Table 1.

#### C. Offices, Shops and Railway Premises Act

There are fifty-eight premises registered under this Act. Four verbal notices and seven informal notices were issued concerning items required to comply with the Regulations.

#### D. Housing

Full details are shown in Appendix D, Table 2 and give a complete picture of the housing situation in the Langport Rural District.

The Council built eleven houses and a further 133 were completed by private enterprise. At the end of the year the Council had twenty-six under construction and a further ninety-one were being built privately. Also at the end of the year there were 228 applicants for re-housing, a slight increase on the previous year. The Council have encouraged applications for Improvement Grants and wherever possible these have been granted.

#### E. Inspection and Supervision of Food

Milk There are twelve registered distributors. Sampling is carried out by the County Council's staff and ten unsatisfactory samples were reported on. One retailer appeared twice in this list and enquiries discovered difficulties with the refrigeration plant which were subsequently rectified.

Ice Cream There were seventy-seven registered premises for the sale of pre-packed ice cream. Eight samples were taken in the twelve months under review and all were placed in Grade I.

Meat Full details of the 100% meat inspection carried out can be found in Appendix D, Table 3. There are five registered slaughter houses and informal action throughout the year maintained a satisfactory standard of cleanliness and particular attention was paid to lairages.

Poultry Packing Establishments Three poultry packing establishments were operating in the district during the year. The weekly kill was approximately 2,000 but no routine inspection of poultry is attempted.

Food Hygiene Regulations Seventy-one premises are subject to the above Regulations in the district and these were inspected during the year. Nine verbal notices were given, mainly regarding cleanliness. In certain establishments this is a time-consuming operation, whereas in others immediate co-operation is forthcoming.

#### F. Animal Boarding Establishments

There are two registered establishments in the district and considerable difficulty was encountered with one where the water supply was heavily polluted and at the end of the year the owners were considering providing an alternative supply either by the provision of a new bore or connection with the mains supply.
